Nikita Orlovs

ML Engineer · ADS&AI Student at BUas

ABOUT

I'm a 3rd-year Applied Data Science & AI student at Breda University of Applied Sciences (BUas). I build deployable ML systems end-to-end: data preparation, model training, APIs, Docker, testing, and cloud workflows (Azure ML). Looking for an internship in MLOps, ML platform engineering, or data automation — where I can work on production-minded pipelines and reliable deployments.

EDUCATION

BSc Applied Data Science & AI *Sep 2023 – Present*

Breda University of Applied Sciences (BUas) · Breda, Netherlands
Class of 2027 · Field: Applied Data Science & Artificial Intelligence

General Secondary Education *Sep 2011 – May 2023*

Riga Secondary School No 22 · Riga, Latvia

SELECTED PROJECTS

NLP — Emotion Classification Service | BUas · May – Jun 2025

MLOps + FastAPI + Docker + Azure ML

- Built a Dockerized FastAPI service + Streamlit demo for emotion classification with bulk CSV and audio transcription.
- Implemented automated Azure ML retraining pipeline: merge feedback → preprocess → train → evaluate → conditional deploy.
- Added pytest test suite, structured logging, and documentation for local and cloud deployment.

norlovs.github.io/projects/nlp-emotion-service-mlops.html

CV + Robotics Pipeline — OT-2 | Client: NPEC.nl · Nov 2024 – Jan 2025

Computer Vision + PID + PPO Reinforcement Learning

- Built a U-Net segmentation model to detect Arabidopsis root tips in Petri dish photos.
- Implemented pixel-to-world coordinate transform and two controllers: PID (≤ 1 mm accuracy) and PPO RL agent (5M training steps).
- Delivered end-to-end prototype with PyBullet simulation, reproducible scripts, and GIF demo outputs.

norlovs.github.io/projects/ot2-robotics-cv-control.html

Grocery Image Classifier + XAI Suite | BUas · Feb – Apr 2024

CNN V1–V4 + Grad-CAM + LIME + KernelSHAP + A/B Test

- Built and iterated CNN classifier (V1–V4); V2 outperformed V4 — key finding: Dropout hurts on small datasets.
- Applied 5 XAI methods (Grad-CAM, Grad-CAM++, LIME, Integrated Gradients, KernelSHAP); identified 50 pp accuracy gap across classes.
- Ran real A/B usability test with T-test analysis; statistically significant differences on 3/5 questions.

norlovs.github.io/projects/product-image-classifier-hcai.html

SafeRide — Road Risk Prediction | Client: ANWB · May – Jun 2024

PostgreSQL + Feature Engineering + KNN/RF/GB/NN + Figma

- Joined 4 datasets (138K records): ANWB incident data + KNMI weather tables; engineered composite risk score.
- Compared 4 models; selected KNN (k=11) for best class balance across Low/Medium/High risk — not raw accuracy.
- Designed complete mobile app UI in Figma; delivered Streamlit prototype with responsible deployment documentation.

norlovs.github.io/projects/saferide-risk-prediction.html

WORK EXPERIENCE

Night Auditor (part-time) · Oct 2023 – Present

Eindhoven Hotel Operator B.V. · Eindhoven, Netherlands

- Manage night shift independently: guest support, issue resolution, handover reporting.
- Maintain incident logs and stable operations during low-staffed hours.

Junior Full-Stack Developer (Freelance) · Jul – Aug 2023

Moscow State Aviation Technological University

- Delivered full website end-to-end: PHP + MySQL backend, JavaScript interactive UI with world map and carousel.

UI/UX Design Assistant & Frontend Developer · *Jul 2022 – Jun 2023*

Apprenticeship / part-time

- Implemented responsive UI from Figma/XD layouts using HTML, CSS, JavaScript.
- Used Git for version control across a long-running project.

ENTREPRENEURSHIP

Founder — CRA art (ex CDA Universe) · *Jul 2025 – Present*

VR platform: hub → portal worlds for museums, art foundations & brands

- Built core prototype in Unreal Engine 5: central hub with portal navigation and gravity-switching mechanics.
- Developed business case: B2B + B2C model, pricing, 2026–2028 financial model, TAM/SAM/SOM, conjoint survey validation.
- Live demos at Escher in Het Paleis (The Hague); pursuing 1–2 pilot collaborations.
